Rmd header

global Rmd options

library loading

global analysis setting  
var\_name = var\_value

data loading

data handling cell script

output

data handling cell script

output

data saving

session information

`.libPaths()`  
to retrieve the directory of packages

`library(...)`  
for graphical and data manipulation packages only

natural language comments

meaningful titles, consistent across notebooks

avoid absolute paths

`package::function`  
to call functions, for better traceability

save in RDS or CSV, for interoperability  
avoid RDA

`sessionInfo()`
